Complete The Insects

Cognition, Creativity, Fine Motor

Insect Or Not

: Take a look at the images given. How many of them do
: you think are insects?
: Help your toddler identify and circle the insects.
: Then, introduce them to the names of the insects.

Spider

Toothpaste

Ladybird

Kennel

Key

How This Activity Helps

Your toddler learns to spot and identify the insects.

Help your child describe each insect. Then, narrate stories about an insect.

Colourful Insects

We have red insects, green insects, yellow insects... etc. Insects are of so many different colours!

Help your toddler match the colours on the left column with the insects on the right column.

Red

Yellow

Green

How This Activity Helps

Your toddler observes and matches each colour with the corresponding insect. Help your child describe each insect — grasshopper, ladybird, honeybee — and its colours.

Missing Ladybird Spots

Look at the ladybird! There's something missing, isn't it?

Help your toddler colour the spots on the ladybird in any manner they like — using crayons or child-friendly paint. Make the spots as colourful as possible.

How This Activity Helps

Your toddler's creativity is enhanced when they colour the spots on the ladybird. Help your child narrate a story about a colourful little ladybird that is out on a walk. What all does it see?

Fingerpaint The Butterfly

*Flutter, flutter. Look at the butterfly fluttering about.
Where did its colours go?*

*Help your toddler dab some paint on their fingers and
finger-paint the butterfly. Use child-friendly paint and
make the butterfly as colourful as possible!*

How This Activity Helps

*In this sensorial activity, your toddler learns a different technique of painting — one with their fingers!
Help your child build a story about the colourful butterfly. Where could it be fluttering about?*

Fly To Flowers

Bzzz! Two honeybees are looking for flowers.

Help your toddler trace along the dotted lines using their finger to guide the honeybees to the flowers.

How This Activity Helps

Your toddler's visual tracking skill improves when they trace on the dotted lines.

Discuss the honeybees — how they collect nectar, where they live, the sound they make, etc.

Insect Banner

Are you ready to colour and decorate your wall with colourful insects?

Help your toddler colour the insects in any manner — using crayons, finger-painting, using paintbrush, etc. Once done, cut out along the dotted line, punch out holes, and string a yarn through the insect cut-outs. The colourful insect banner is ready!

Ant

Ladybird

Housefly

Spider

How This Activity Helps

Your child's hand-eye coordination improves while they attempt to string the yarn through the eyelets. Help your child describe each insect with respect to the numbers of legs, if they have wings, etc.

Match The Silhouettes

In one column you have the insects; in the other you have their shadows. But, they are mixed up!

Help your toddler observe, identify, and match the insects with their silhouettes.

Grasshopper

Butterfly

Ant

How This Activity Helps

Your toddler observes and tries to pattern-match each insect with its corresponding shadow. Name each insect and help your child describe each of them — colour, number of legs, etc.

Paint The Beehive

Do you hear the honeybees buzzing around the beehive?
But, where did their colours go?

Help your toddler dip some cotton in child-friendly paint.
Then, let them dab the cotton on the honeybees and the
beehive. Once dry, help your little one narrate a story about
what could be happening in and around the beehive.

How This Activity Helps

Your toddler gets a tactile sensory experience while painting the honeybees and the beehive using cotton.

Butterfly Mask

Pssst...! Did you know that you can turn into a butterfly? Well here you can.

Help your toddler colour the butterfly mask in any manner they like — using crayons, paint, etc. Once done, cut along the dotted lines. Thread some yarn through the two small eyelets. Tada, your mask is ready! Your child is all set for a pretend play.

How This Activity Helps

Your toddler's self-confidence is enhanced while they independently colour the butterfly mask and come up with a colour composition. Introduce your little one to the butterfly — it's colours, how it flies, etc.

Complete The Insects

There are insect bodies and their wings by their side. In this activity, you will help the insects get back their missing wings.

Help your toddler observe, identify, and assemble the insects and their corresponding wings together, by cutting and sticking the wings. Don't forget to colour them first!

Dragonfly

How This Activity Helps

Your child tries to match the wings of dragonfly and a butterfly. It improves their observation. Help your child describe each insect.

Butterfly
